SABHARI SHRINIVAS

Senior Unity Developer | AI-Assisted Development

Bangalore, India • +91 70107 99731 • sabhari.thirumurugan@gmail.com • github.com/sabharishrinivas • linkedin.com/in/sabharishrinivas • portfolio-sabhari-shrinivas.vercel.app • sabhari-shrinivas.itch.io

PROFILE

Senior Unity developer with 5+ years of C# and Unity experience, combining deep engine work with a production agentic workflow. Led warehouse digital twin systems (snapshot-based state reconstruction, DOTS/ECS simulation of thousands of agents, 40% lower navigation memory). Most recently shipped gameplay and UI for a 1.6B-visit live title in a Claude-based workflow that took the team from 2 to 4–5 releases per week, using shared context files, a custom MCP server and agent guardrails.

SKILLS

Unity	DOTS/ECS, Job System, Burst, Addressables, URP, Timeline, WebGL, Profiler, Shader Graph, VFX Graph
C# & architecture	OOP, SOLID, design patterns, async/await, zero-GC and data-oriented code
AI-assisted dev	Agentic workflows with Claude, context engineering (CLAUDE.md), custom MCP servers, agent guardrails, token efficiency, human-in-the-loop review
Systems	Simulation and replay engines, NavMesh / A* pathfinding, FSMs, AI systems
Integration & tools	REST, WebSocket, custom Unity Editor tools

EXPERIENCE

Senior Front-End Developer · Small World Games (Roblox) Jul 2026 – Oct 2026

- Owned gameplay and UI implementation for the LiveOps layer of **Deathball**, a Roblox title with **1.6B+ visits** and **~10K average CCU**.
- Worked in an agentic, Claude-based development workflow that raised the team's release throughput from **2 to 4–5 features and updates per week**.
- Contributed to the team's context-engineering layer: shared CLAUDE.md project files giving agents consistent knowledge of the codebase and its conventions.
- Used a custom Roblox MCP server daily, giving agents direct tool access to the engine for gameplay and UI delivery.
- Helped maintain agent guardrail files (do/don't rules) capturing past failure modes, reducing repeated mistakes, wasted tokens and rework.

Senior Unity Developer · Gaea Global Technologies 2025 – Jul 2026

- Led high-fidelity warehouse simulation and digital twin systems for 1M+ sq. ft facilities.
- Architected a **snapshot-based state reconstruction engine** enabling time-scrubbing and real-time playback of historical telemetry.
- Simulated **thousands of agents** using Unity DOTS/ECS, the Job System and Burst.
- Optimized pathfinding and NavMesh data for 1M+ sq. ft environments, **cutting memory footprint by 40%**.
- Integrated REST APIs and WebSocket streams to drive real-time digital twin synchronization.

Unity Developer · Gaea Global Technologies 2023 – 2025

- Developed a modular **Digital Twin Builder** platform enabling rapid layout configuration for warehouse managers.
- Engineered custom **Unity Editor tools** automating asset placement and metadata tagging for BIM models.
- Implemented data-driven systems for resource management and automated task-allocation simulations.

Front-End Game Developer · Small World Games (Roblox) 2022 – 2023

- Designed and implemented responsive UI systems for Roblox experiences. Worked with UX designers to refine animation curves and input responsiveness, improving player retention.

Freelance Game Developer · Indie & client projects 2020 – 2022

- Built and delivered 2D and 3D indie and mobile games end to end, from code to asset configuration.

EDUCATION

B.Sc. Computer Science, Sethu Institute of Technology · CGPA 8.0
